

Quorn Park Hybrid

Project Update

Construction Update – June 2025

Construction activities of the Quorn Park Hybrid Farm, on Back Trundle Road, Parkes NSW are progressing onsite, with materials delivered for access tracks and working areas.

Road upgrades to Henry Parkes Way and McGrath Lane, including an upgrade to the intersection, are progressing.

Piling works have completed in early June 2025.

Vehicle movements are being continuously monitored to minimise impacts to local road users where possible.

Light and heavy vehicles will continue along Henry Parkes Way, McGrath Lane, and Back Trundle Road as materials and personnel are transported to site, generally between 7.00am –6.00pm Monday to Friday.

Civil works for the project's substation and for the substation access roads are ongoing.

The 'Golden Rows' - the first solar panel rows installed on-site, which serve as the benchmark for layout, quality, and installation pace -have now been completed.

With the completion of this key milestone , the project team was pleased to welcome representatives from the Parkes Shire Council to site in mid-June. The purpose of the visit was to showcase recent progress on site, and outline the next steps as the project moves into its next phase.

The mechanical crews are beginning installation of the tracker components, which allow the solar panels to follow the sun's movement and maximise energy production throughout the day.

Panel installation will commence in the upcoming weeks, once the mechanical assembly of trackers is in progress.

Construction hours are Monday to Friday 7:00am to 6:00pm, and Saturday 7:00am to 1:00pm. All construction works are undertaken in accordance with the conditions of the Development Approval and relevant legislative requirements.

Creating Shared Value

Potentia Energy is committed to a Creating Shared Value (CSV) approach during the lifetime of the project. Potentia Energy intends to work closely with the local community to enhance the economic and social conditions in the local area and proactively share benefits within the local community.

Potentia Energy is also committed to local sourcing throughout the project's operational and construction phases, where feasible. It is expected that the project will create significant local employment and supply opportunities during construction.

Potentia Energy will work closely with the main contractors to identify capability and capacity in the local area. Potentia Energy and Beon Energy Solutions (EPC contractor for the project) aim to maximise opportunities for local contractors and suppliers to participate in the project through the provision of goods and services to the project site and workforce.

Beon Energy Solutions is seeking to employ a local workforce to support project construction, with a variety of roles available including labourers, truck drivers, cleaners and plant operators. Employment information sessions will be held in Peak Hill and Parkes on the 16th and 17th July respectively, for community members to learn more about the opportunities available and to register their interest. The specifics of these roles will also be made publicly available by recruitment agency Chandler MacLeod. For more information visit www.jobsinsolar.com.au, or contact Chandler MacLeod at jobsinsolar@chandlermacleod.com.
