

Flat Rocks Wind Farm Stage 1.

Project Update – February 2024.

Construction Activities

We continue to work closely with all relevant stakeholders, including Western Power (WP) and the Australian Energy Marketing Operator (AEMO), to meet requirements of the commissioning phase.

During this generator performance testing phase, we are limited to the number of turbines we can operate at once, according to the test plan approved by WP and AEMO. We expect to reach full capacity in the coming months where you'll see all turbines moving simultaneously, and consequently enter the operational phase once all the generator performance testing is complete and approved.

Our team is in the process of demobilising temporary offices at the site compound on Warrenup Road as the construction team significantly reduces in the coming weeks.

Houses wanted

Vestas is seeking long-term rentals of reasonable condition for its service technicians working at Flat Rocks Wind Farm Stage 1. These are permanent long-term employees. We have a preference for 3x2 houses with air-conditioning. We are looking to build sustainable relationships in Kojonup and surrounding towns and can provide references from past and current landlords from the Wheatbelt and other WA towns we're involved with. Please contact Ruth Oldert on 0467 865 037 to discuss any opportunities.
